

# ZINC-NICKEL PLATING

**Sun's Zinc-Nickel Plated Cartridges** offer cost effective, corrosion protection for systems that do not need full stainless steel environmental defense. In-House control of the coating process maintains on-time deliveries while offering over 1000 hours of protection during a salt fog test. System designers, service technicians, and machine owners will find these cartridges the ideal balance of protection, price, and performance while maintaining reliable operation under harsh field conditions.
