Registration, Evaluation, Authorization and the Restriction of Chemicals
“REACH” Compliance Statement

August 30, 2021

To our customers:

Sun Hydraulics LLC ("Sun") and global Sun subsidiaries present this disclosure for purposes of compliance with the European Union’s Regulation (EC) 1907/2006, (“REACH” regarding Substances of Very High Concern (herein referred to as “SVHC” or “substance”). This declaration represents Sun's best knowledge and resulting information.

This statement is conveyed with the following conditions:

- Sun does not manufacture or supply chemical products, substances on their own, or preparations as defined by REACH; Sun only supplies finished products, which REACH refers to as “articles”. Sun is an ‘article producer’ (i.e. we use a substance, either on its own or in a preparation, in the course of our industrial or professional activities).

- Sun is excepted from the Regulation’s scope of entity registration requirements (cited as Substance Manufacturers, Article Producers, Importers, or Only Representatives).

- As a “downstream” user, Sun’s European and global operations expect REACH conformity for all materials supplied to us. We are reliant on our upstream suppliers for the pre-registration / registration of chemical substances and preparations used in our products.

- There is no intended release of chemical substances under normal and reasonably foreseeable conditions of use, as defined by REACH.

- While data is expressed in good faith, suppliers and producers may exempt substances or impurities for proprietary purposes. This declaration cannot warrant affiliated suppliers, product users, or other involved parties’ obligations to register or report under REACH for their involvement in Sun article production.

Note: In accordance with the Court of Justice of the European Union ruling in Case C-106/14, REACH compliance statements contained herein apply to individual articles and are not portrayed based on the summation of entire assemblies.
At present, Sun products are compliant (with exceptions noted below) with the SVHC substance lists containing 219 substances, published on July 8, 2021. The presence of SVHC above the exemptible concentration threshold for valves Sun-stamped seals, manifolds, and coils incorporating steel necessitate disclosure regarding for lead, EC#231-100-4. Those purchasing these products are encouraged to take precaution upon exporting to the European Union.

Sun, as a producer of articles meeting the criteria detailed above, affirms to be in compliance with the REACH regulation. Sun will continue to monitor the development of the SVHC candidate list and will comply with notification obligations as applicable. All pending regulations or in process changes to chemical substance lists may not be reflected in this edition.
