# Hi-Low Pump Unloader or Accumulator Charge Pump Unloader Valve Packages

Sun Hi-Low and Accumulator Charge Pump Unloader Valve Packages are pre-engineered valve assemblies used in dual pump and accumulator circuits. In hi-low circuits the valve package automatically unloads/loads one pump when a preset pressure and differential are reached. When used as an accumulator charge pump unloader the package will unload the pump when a preset pressure is reached and reload the pump when the pressure falls to a set differential. The package features a tunable soft pump unload feature and other unique options. Available in SAE O-ring, BSPP, and 4-bolt flange port configurations.

Flow	Sun Model Code*	а	b	c	d
15 GPM	XQCF-L**-**	6.31	4.50	4.00	5.00

\*Add modifier /S for ductile iron

#### XQCF-L\*\*-\*\*

#### Benefits:

- Convenient completely assembled and ready to operate
- Reduced system shock tunable soft pump unload feature
- Versatile
  - Flows up to 15 GPM
  - Pressure sets from 150 to 5000 psi
  - Unload/load differential from 15% to 50%
- Options
  - Priority accumulator charge
  - Automatic accumulator discharge on pump shutdown
