Sun offers sandwich and subplate mounted bodies for most of its cartridge functions. These mounting configurations are complete circuit elements that mount under directional control valves. Similar to other Sun mounting configurations, the sandwich and subplate bodies are available in aluminum and ductile iron material.

The sandwich and subplate bodies are available in five different interface patterns as shown below:

**Mounting of ISO 03 Sandwiches**

Sun’s ISO 03 sandwich bodies are designed for multi-functional use to permit maximum circuit flexibility. Due to this versatility, the ISO 03 sandwich bodies do not have a counterbore for installing O-ring seals. Instead, Sun uses a special seal plate with a raised “NIB” and a locating “NOTCH”. Sun bodies incorporate oversize, symmetrical mounting holes to allow the bodies to be rotated about the “NIB” axis and the longitudinal axis as shown in Figure 1.

Rotation about the “NIB” axis enables the “A” and “B” port connections to be interchanged and rotation about the longitudinal axis enables the “P” and “T” ports to be interchanged.

All Sun seal plates are manufactured to current industry standards regarding port and mounting bolt locations. Each Sun D03 sandwich body is supplied with a “NIB” locating hole which is drilled on each mounting face to position the body in the correct relationship to the ports and mounting holes. To further ensure that all bodies are located properly, all ISO 03 sandwich bodies are stamped with an arrow (or arrows) to show the relationship to the notch in the seal plate (see Figure 2). Multi-function bodies are “NOTCH” stamped for all possible mounting positions and all positions should be carefully inspected to be sure the intended function is correctly installed.

**ISO 03 Sandwich Bodies stamped with numbers to orient body for desired function**

The function symbols on the data pages for Sun’s ISO 03 sandwich bodies are shown with numbers (1, 2, 3, 4) in the upper right and lower left hand corners. These numbers correspond to numbers stamped on the face of the bodies and designate the functionality of the product. Because many of these bodies can be used for different functions, the bodies are stamped to help the user orient the body for the function desired.

Some bodies can be mounted in four different orientations, as shown in Figure 1A on the facing page. The example below shows GBA. As demonstrated by the function symbols, this single body can be used to achieve four different functions: Meter–in A, Meter–out A, Meter–in B, and Meter–out B. The body drawing only indicates the Meter–out B and Meter–in A orientations because only one face of the body is shown. The Meter–out A and Meter–in B functions are shown in the symbols with the numbers 3 and 4, which correspond to the numbers stamped on the opposite face of the body.

### Rotation Example for ISO 03 bodies using subplate GBA.

**STEP 1**

Begin with body view showing stamped number 1 in lower left corner. Note the location of P, T, A, and B ports and the position of the cavity. This position places the P port of the sandwich nearest to the viewer. The sandwich is now oriented for the meter–out B function.

**STEP 2**

Rotate the sandwich on the longitudinal axis to orient body for meter–in B function.

Note that the numbers on the function symbol for GBA correspond to the numbers stamped on the body.
Sandwich Bodies

TECHNICAL PRODUCT INFORMATION

Sandwich Assemblies

ISO 03 / CETOP 3 FLOW CONTROL VALVES

Figure 1A

Assembly of ISO 03 Sandwiches

1. Place the Sun seal plate, with the “NIB” facing upward, in the proper position to correctly align the mounting holes and fluid ports. At this time, the “NOTCH” in the seal plate must be adjacent to the “P” port of the valve interface. See Figure 1.

2. Position the Sun sandwich body so that the control “NOTCH” arrow for the required function points to the “NOTCH” in the seal plate. See Figure 2.

3. Move the sandwich body as required to engage the “NIB” on the seal plate with the clearance hole in the body.

4. After determining the correct alignment of the sandwich body to the seal plate, lift the body and plate together, turn the assembly over and locate the correct hole in which to press the locating pin. The locating pin is shipped separately. Press the pin, serrated end first, into the body until it stops. The pin must protrude below the seal plate to positively align with the mounting surface. If a valve stack requires disassembly at anytime, the pin should not be removed. It will simplify the reassembly of the valve stack.

5. After all the body alignments have been determined and all pins installed, assemble the valve stack in the required functional order. Make sure all the O-rings are properly positioned. Install the directional control valve on top of the stack and tighten the stud nuts alternately to the proper torque of 40-45 lb. in.

Mounting ISO 05 Sandwich Bodies

Sun ISO 05 sandwich bodies are available for many mounting configurations. The standard ISO 05/NFPA D05 is offered with two methods of sealing the fluid interface. The sealing method depends on the ability of the body to be rotated about its axis. Sandwich bodies that can be rotated will use a Sun seal plate supplied with the body. Non-rotating bodies will have counterbores machined into the body sealing surface for O-ring placement. The ISO 05 sandwich body can only be rotated about the “NIB” axis referred to in the ISO 03 sandwich section. There is no “NIB” on the ISO 05 subplate, it is used only for axis reference. Longitudinal axis rotation is not possible due to the lack of symmetry of the fluid ports.

Mounting ISO 05 X, Y Sandwich Bodies

Sun ISO 05 X, Y sandwich bodies are furnished with pilot and drain connections. Due to the differences in the U.S. and European seal plates, none are supplied with these bodies. They
Sandwich Bodies

Kit #990-120-009  Kit #990-120-012

1. Verify that the correct seal plates have been selected (if required) and position the sandwich body so that the fluid ports are correctly aligned and the correct port (A or B) is being controlled.

2. After determining the proper alignment of all the sandwich bodies, assemble the valve stack in the required functional order. Make sure all the O-rings are properly positioned. Install the directional valve and tighten the studnuts alternately to the proper torque of 105–110 lb. in.

Studkits for ISO 03 and ISO 05 Sandwich Bodies

To simplify the installation of ISO 03 and ISO 05 sandwiches, Sun offers uncut (can be cut to length in the field) or precut studkits in both inch and metric standard threaded rod. Once the rods are installed in a substrate or manifold, they act as a guide in assembling the sandwich body stack. After the directional control valve is assembled on top of a stack, Sun studnuts are used to retain the assembled stack.

The inch and metric studrods are both made of high tensile, fully threaded ASTM A-193 Grade B material with the following mechanical properties:

- 125,000 psi minimum tensile strength.
- 105,000 psi minimum yield point.
- 26–32 Rc hardness.

The studnuts are special hex socket nuts with the following features:

- An outside diameter equivalent to a standard socket head cap screw.
- Full thread engagement as shown below.
- Mechanical stop between the internal hex and the thread to prevent the hex wrench from being pushed out of its socket.

ISO 03 Studkits (recommended torque – 40-45 lb. in.)

ISO 05 Studkits (recommended torque – 105-110 lb. in.)

Inch Standards

- (4) 1/4–20 Studnuts and (4) approximately 7” long M5 studrods
  Kit # 992001
- (4) 1/4–20 Studnuts and (4) approximately 12” long M5 studrods
  Kit # 992002
- (50) 1/4–20 Studnuts and (10) approximately 36” long M5 studrods
  Kit # 992500
- (50) 1/4–20 Studnuts only
  Kit # 992500
- (4) 1/4–20 Studnuts and (4) 1/4–20 studrods cut to customer specified length (± .062”)
  Kit # 992600

Metric Standards

- (4) M5 Studnuts and (4) approximately 7” long M5 studrods
  Kit # 992111
- (4) M5 Studnuts and (4) approximately 12” long M5 studrods
  Kit # 992112
- (50) M5 Studnuts and (10) approximately 36” long M5 studrods
  Kit # 992113
- (50) M5 Studnuts only
  Kit # 992750
- (4) M5 Studnuts and (4) M5 studrods cut to customer specified length (± .062”)
